PORTFOLIO GAME

INSTRUCTIONS

Contents: 36 game pieces (9 each in 4 different colors) and game board

Each player chooses 9 game pieces of the same color and places them on the coordinating color triangle of the game board nearest him.

The object of the game is for each player to move all his pieces from their starting triangle to the triangle directly opposite on the game board. The first player to successfully move all his pieces to the point opposite is the winner.

Any player may begin, and play moves to the left in clockwise rotation, with each player making one move at a time. A game piece may move in any direction to an adjacent hole. A player may jump his piece over another piece, providing there is an empty space opposite the jumped piece. A player may jump over more than one piece only if there is an empty space opposite each token jumped. Players may play as partners or against each other. No player can refuse to move out of his starting triangle to prevent another player from winning.
