FOR AGES 6 & UP
Welcome to

The Moving, Mind-Building, Modeling System™

ZOOB's five basic pieces snap, click, and pop together more than 20 different ways, and this booklet teaches you how to connect them (after you've connected them, be sure to check out how they move!). When you've mastered these connections, you'll be ready to start making the ZOOB vehicles in this booklet, and to use your imagination to invent your own ZOOB vehicles and creations.

Please note that this ZOOBMobile set features two special ZOOB pieces. So, as you practice the connections on the next few pages and follow the instructions in this booklet, be sure to match the shape of a piece to the piece shown in the pictures—don't just look at the color.
These basic connections will help you make lots of creations.

ZOOB pieces rotate and lock into more than 100 different positions!

Ball socket

- Push one ball into a jaw
- On a flat surface, push a jaw over a ball

Saddle

- Push one jaw and another jaw together
- Pull both jaws back to snap and lock

Full orbit

- Face a notch into another notch and snap together
- Combine notch connections to create a spine, add more to make a bracelet

Each ZOOB piece has its own shape.

Keep fingers out of connections.
With more ZOOB pieces, you can connect fireman's weaves to form a pattern.
Create these basic structures and make them move.

Take care of your ZOOB pieces and avoid bad connections—they wear out ZOOB jaws.

Mend your ZOOB jaws by GENTLY squeezing them together.
Read these tips for the best Fastback racing performance.

The ZOOB Fastback uses a special rear wheel assembly with a wind-up spring motor that never needs batteries.

Once you have built your vehicle, you are ready to race!

1. With the wheels touching the ground, hold your vehicle near the motor housing and slowly pull back.

2. Continue to pull back until you hear a clicking sound (this means the motor is fully wound). Or, pull back as far as you can reach. Then, without lifting the wheels off the ground, put your thumb on one of the wheels (to keep it from moving). Lift your car and put it back where you started (on the ground). Remove your thumb and pull your car back again. Repeat until you hear a clicking sound.

3. Point and release your vehicle in a safe direction, allowing for travel distances of up to 25 feet or more.

TIP: Vehicles with fewer pieces will travel faster and farther than those with more pieces.
GO KART

Vehicles with fewer pieces will travel faster and farther than those with more pieces.

UNLIMITED CREATIVE BUILDING

ZOOB is an open-ended building system, which means there's no limit to what you can build . . . or the fun you can have.

ZOOB sets range in size from a 15-piece set up to a 500-piece set that includes 4 foam play pads and a large storage case. Every ZOOB set comes with instruction guides, but the real fun is in designing (and playing with) your own ZOOB creations.
The ZOOB • Bot can help you build your own robots using ZOOB pieces, light-up eyes, and a pull-back motor that makes the eyes light up!

ZOOBDudes are adventure heroes with faces, helmets, and their own working accessories—the Fireman squirts water, the Ranger glides with its parachute, and the Rock Climber climbs up the line.

ZOOBMobile Car Sets feature special racing colors and sturdy wheels with rubber tires that also work like gears. The Dragster Set features two large wheels and four regular wheels for extra building fun. The motorized Cruiser has 55 ZOOB pieces, 4 extra wheels, and a remote control unit so you can drive it after you build.

ZOOB Creator's Kit: Build with ZOOB, then transform your creations with colorful, durable foam pieces—from robots to rabbits, you can build all sorts of creations.

ZOOBMover R/C: Snap ZOOB pieces onto the ZOOBMover to build anything you can imagine—from a dragon to an ant to an armadillo. Then make your creations walk, crawl, and spin with the remote control unit.
